Error Log: Displays errors that occur when reading files.

Make Movie: Creates a self-contained QuickTime™ movie.

Print Preview: Lets you customise printable image reports.

Page Setup: Lets you choose printer options.

Print: Prints using your preview options.

Edit

Cut: Copies the selected image (as PICT) and removes it from the list.

Copy: Copies the selected image (as PICT).

Clear: Remove the selected item from the catalog.

Clear All: Removes all items from the catalog.

Copy Image Path: Puts the path of an image on the clipboard.

Rename Selection: Opens a dialog allowing renaming the catalog and original image.

Preferences: Opens the preferences dialog.

List Tags: Choose which tags are displayed in the Info view.

Marks

Toggle Mark: Changes the marking on the selected item.

Mark All: Mark All

Unmark All: Unmark all the items.

Toggle All: Toggle marked and unmarked items.

Mark All Missing Files: Mark files not on mounted volumes.

Mark Filtered Files: Mark files using the settings in the filter box.

Reveal Marked Items: Reveals marked files in Finder windows.

Remove Marked Items: Removes marked files from the list.

Mark Files Toolbox: Actions to perform on marked files.

Folders

Edit Folder List: Adds or Removes folders for fast image selection.

Get From Selection: Adds the folder of the selected item.

More items will appear in this menu as you build it up. Store commonly used folders to quickly view all images included.
