1.1 Cloanto Internet Graphics DataTypes

Cloanto Internet Graphics DataTypes \$^1\$

Cloanto GIF DataType v. 43.4

Cloanto JPEG DataType v. 43.0

Cloanto PNG DataType v. 43.3

Cloanto XBM DataType v. 43.0

The DataTypes which are included here were designed to read the four most popular image file formats used on the Internet: GIF, JPG, PNG and XBM.

The DataTypes support unusual format variants, true color and grayscale modes, as well as attribute fields like Author, Copyright and Comment.

The DataTypes can be installed automatically ("Install" script), or manually by copying the contents of "Devs/DataTypes" to "DEVS:DataTypes" and the contents of "Classes/DataTypes" to "SYS:Classes/DataTypes". Users of Amiga systems with a 68020 or higher CPU can install a special version of the DataTypes, written to take advantage of new features of these more powerful CPUs. To use this version, install only the files in "Devs/DataTypes" which end in ".020", and remove the ".020" suffix after installation (e.g. "jpeg.datatype.020" becomes "jpeg.datatype"). This is also taken care of by the automatic installation.

DataTypes are supported by version 3.0 and higher of the Amiga operating system.

These DataTypes, and in particular the GIF DataType, are subject to the Legal Notes included in the Personal Paint 7.1 documentation ("PPaintCD.guide").

Your feedback on this software is very appreciated.
