Installation Space Requirements

Because of variable disk **cluster sizes**, the HoTMetaL PRO Evaluation installer cannot predict with complete accuracy whether or not your hard disk has enough free space to hold the HoTMetaL PRO Evaluation software. The installer will warn you if the available disk space is within 10Mb of the expected requirements.

If you run out of space during the installation, the installer will suspend the installation, giving you the opportunity to free up some space on your disk by deleting files, and then resume the installation.
