Description:
PriorityMail is a filter for Mail.app that prioritizes mail based on who is in the recipient or sender list.

Once *installed* and *configured*, whenever you get new mail, it will display the `Subject:` line of a mail message you specify as First Class...

```
Subject: --1-- original subject line
```

then you can use Mail.app's *Utilities->Sort by Subject* to read all your First Class msgs together.

Installation...
  Run the application for further instructions.
