## **UHMath Object**

UHMath allows the user to communicate with *Mathematica* in Mathlink mode. It makes *Mathematica*'s computational power available to the user—from Objective C programs. The accompanying UHMathPalette makes the communication process even simpler by allowing the user to connect to *Mathematica* in Interface Builder. The user can send any valid *Mathematica* expression—to UHMath and obtain the result as a string or display the result as a plot,—depending on the method called and the input given.

Dr. John R. Glover Electrical Engineering Department University of Houston Houston, TX 77204-4793

**Phone:** (713)743-4430
