Your Call Server

The **YourCallClient** and **YourCallServer** applications, as described in "Extending the Advantage," are implemented as two separate projects.   This project folder contains the **YourCallServer** application.   This project includes the following source file changes from the simple **YourCall** application:

callData.h

Declares the CallData protocol

callProvider.h

Declares the CallProvider protocol

CallRecord.[hm]

As in **YourCall**, except for modifications to the ".h" fileÐspecifically, since CallRecord conforms to the CallData protocol, the methods in the protocol are removed from the CallRecord.h file.

CallServer.[hm]

A subclass of CallController that implements the CallProvider protocol

Steps for creating this project are included in the source code listings in *The NeXTSTEP Advantage*.
