

To guarantee the integrity of the fixes included in this patch, you should only install this software when received from an authorized NeXT representative. Your existing NeXT Software License Agreement governs the use of this software update.

INSTALLING THE NEXTSTEP RELEASE 3.3 PATCH UPDATE

SA4padPointRule2.eps ↵

This document describes how to install the *NEXTSTEP Release 3.3 Patch Update* and describes the fixes contained in the update. This update is to be installed *only* on computers running *NEXTSTEP Release 3.3*.

The *NEXTSTEP Release 3.3 Patch Update* consists of two User Patch packages:

69667_SA1PointRule2.eps ↵

974242_stepArrow.tiff ↵ 3.3Intel68kPatch.pkgⓂContains updated system software for Intel PCs or NeXT computers running *NEXTSTEP Release 3.3*.

550368_PointDashedRule3Black.eps ↵

872280_stepArrow.tiff ↵ 3.3HPPASPARCPatch.pkgⓂContains updated system software for Sun or HP workstations running *NEXTSTEP Release 3.3*.

25990_PointDashedRule3Black.eps ↵

and one Developer Patch package:

946230_SA1PointRule2.eps ↵

56220_stepArrow.tiff ↵ 3.3DeveloperPatch.pkgⓂContains updated developer tools for all types of computers running *NEXTSTEP Developer Release 3.3*.

156223_PointDashedRule3Black.eps ↵

In addition, the *NEXTSTEP Release 3.3 Patch Update Floppy* contains:

172336_SA1PointRule2.eps ↵

320630_stepArrow.tiff ↵ 3.3PatchRelNotesAddendum.rtfⓂThis document.

476056_PointDashedRule3Black.eps ↵

611982_stepArrow.tiff ↵ Read-Me-First.rtfⓂA pointer to the installation instructions in this document.

711976_PointDashedRule3Black.eps ↵

871874_stepArrow.tiff ↵ 3.3Patch.ImprovedDNS.post_installⓂAn installation script.

981869_PointDashedRule3Black.eps ↵

587174_stepArrow.tiff ↵ 3.3Patch.LibrariesOK.post_installⓂAnother installation script.

901828_PointDashedRule3Black.eps ↵

Note the following points before you install the Patch Update packages:

600587_smBlksquare.tiff ↵ Install just one package at a time. Install the User Patch package first; afterwards, install the Developer Patch package (if you're running *NEXTSTEP Developer Release 3.3*).

790884_smBlksquare.tiff ↵ If you plan to use Emacs, be sure you've already installed the contents of the

Emacs.pkg (contained on the *NEXTSTEP Release 3.3* CD-ROM) *before* installing the User Patch package.

264166_smBlksquare.tiff ↵ When installing the Release 3.3 Patch Update packages, select the same architectures and languages as you did when originally installing the *NEXTSTEP Release 3.3* and *NEXTSTEP Developer Release 3.3* software.

943601_smBlksquare.tiff ↵ After installing the Release 3.3 Patch Update packages, you must run one of the provided installation scripts. See the next section to decide which script you need to run.

437339_SA2PointRule2.eps ↵

Deciding which Installation Script to run

577327_SA4padPointRule2.eps ↵

There are two installation scripts (**3.3Patch.ImprovedDNS.post_install** and **3.3Patch.LibrariesOK.post_install**) included with the *NEXTSTEP Release 3.3 Patch Update*. You need to run one of these scripts after installing the **3.3Intel68kPatch.pkg** or **3.3HPPASPARCPatch.pkg** Patch Update packages.

770414_smBlksquare.tiff ↵ If you run any POSIX-based application on your system, or if you run any statically linked programs that uses the *gethostbyname()* or *gethostbyaddr()* system calls, you should run **3.3Patch.LibrariesOK.post_install**.

900331_smBlksquare.tiff ↵ If neither of the above circumstances apply to your system, then you should run **3.3Patch.ImprovedDNS.post_install**.

Given the choice, **3.3Patch.ImprovedDNS.post_install** script is the better alternative. This option enables the changes to **lookupd** described later on in this document (Reference: 36740, 54181, 57737). Unfortunately, this optimization introduced an incompatibility with certain functions in the previously shipped static libraries, and you will be unable to fix this problem until a new set of static libraries is made available.

See the comments inside the scripts for details on what changes the scripts are making to your system.

455489_SA2PointRule2.eps ↵

Installing the NEXTSTEP Release 3.3 Patch Update Packages

274572_SA4padPointRule2.eps ↵

Follow these instructions to install the *NEXTSTEP Release 3.3 Patch Update*.

424710_SA1PointRule2.eps ↵

1. Log in as **root**. (If you're not sure how to log in as **root**, see your system administrator.)

573843_PointDashedRule3Black.eps ↵

2. Make sure your computer is running *NEXTSTEP Release 3.3*. (You can find the NEXTSTEP version number with the Workspace Manager application's Info Panel command.)

Warning: Installing the *NEXTSTEP Release 3.3 Patch Update* on a computer that isn't running *NEXTSTEP Release 3.3* will result in unexpected problems. There is no way to remove the patch once installed. Your only recourse will be to reinstall NEXTSTEP.

3. Double-click the **3.3Intel68kPatch.pkg** file or the **3.3HPPASPARCPatch.pkg** file (be sure to choose the one that corresponds to the type of computer you're installing the package on).

738277_PointDashedRule3Black.eps ↵

4. Click the Install button in the Installer package window.

An Install Package panel opens. Use this panel to select the same architecture and languages as you did when originally installing the *NEXTSTEP Release 3.3* software.

894155_PointDashedRule3Black.eps ↵

5. Click Install in the Install Package panel, and if prompted for confirmation, click OK to proceed.

The Installer window displays information about the progress of the installation, which may take several minutes.

47463_PointDashedRule3Black.eps ↵

6. After Installer finishes installing the User Patch package (either **3.3Intel68kPatch.pkg** or **3.3HPPASPARCPatch.pkg**):

192201_smBlksquare.tiff ↵ If you *haven't* previously installed *NEXTSTEP Developer Release 3.3* on the computer, go to Step 7.

636004_smBlksquare.tiff ↵ If you *have* previously installed *NEXTSTEP Developer Release 3.3* on the computer, install the Developer Patch package by double-clicking the **3.3DeveloperPatch.pkg** file and repeating steps 4 and 5 (remember to select the same architectures as you did when originally installing the *NEXTSTEP Developer Release 3.3* software).

137148_PointDashedRule3Black.eps ↵

7. Run one of the two installation scripts on the *NEXTSTEP Release 3.3 Patch Update Floppy*:

835866_smBlksquare.tiff ↵ Double-click on the **3.3Patch.ImprovedDNS.post_install** or **3.3Patch.LibrariesOK.post_install** file to run the script that you decided was appropriate for system.

726993_PointDashedRule3Black.eps ↵

8. you're done!log out and restart the computer.

493738_SA2PointRule2.eps ↵

Installing the NEXTSTEP Release 3.3 Patch Update Packages from a Network Server

195338_SA4padPointRule2.eps ↵

If you're planning on installing the update packages from a Network Server onto multiple machines, you can simplify the operations to be performed somewhat:

1. Copy the installation packages (**3.3Intel68kPatch.pkg**, **3.3HPPASPARCPatch.pkg**, and **3.3DeveloperPatch.pkg**) to a file server location visible from all client machines that are to be upgraded.

387279_PointDashedRule3Black.eps ↵

2. Copy whichever of the installation scripts you're using (**3.3Patch.ImprovedDNS.post_install** or **3.3Patch.LibrariesOK.post_install**) to **<packagename>.post_install**, and move it into the base system update packages, as follows:

755696_smBlksquare.tiff ↵ Copy (and rename) the appropriate script file to **3.3Intel68kPatch.post_install**.

740376_smBlksquare.tiff ↵ Open the target package file by selecting it and pressing cmd-O.

588521_smBlksquare.tiff ↵ Move the script file into the package directory. Close the directory window.

736982_smBlksquare.tiff ↵ Do the same for the **3.3HPPASPARCPatch.post_install** file and the **3.3HPPASPARCPatch.pkg** directory.

757264_PointDashedRule3Black.eps ↵

3. Now, when you run the Installer application to install the update packages, the installation script will get executed automatically, and will not have to be run manually (skip step 7).

Addendum to the NEXTSTEP Release 3.3 Patch Update Release Notes

657230_SA4padPointRule2.eps ↵

This addendum describes late-breaking information about the *NEXTSTEP Release 3.3 Patch Update*.

Problems Introduced in This Release

873495_SA2PointRule2.eps ↵

The following problems were introduced in this update:

Networking and Networking Tools

438893_SA1PointRule2.eps ↵

Reference: 36740, 54181, 57737

Problem: **lookupd** and DNS interaction add delays to many processes.

Comments: Our intended fix was to move the processing of DNS requests out of **lookupd** and into the calling command or application. We have since discovered a side effect of the fix included with the patch. Any comment lines in the **/etc/hosts** file would cause an additional search of all hosts defined in the NetInfo hierarchy. These extra searches could result in an unacceptable delay for all **lookupd** requests.

Fix #1: Add a **-R** option to the **lookupd** command in the **/etc/rc** file. This will force **lookupd** to use the old (pre-patch) behavior. This fix is implemented by the **3.3Patch.LibrariesOK.post_install** installation script.

Fix #2: Remove all comment lines from the `/etc/hosts` file. You can do this either manually with your favorite editor, or by using the following commands as root.

```
sed '/^#/d' /etc/hosts > /tmp/hosts
mv /tmp/hosts /etc/hosts
```

This fix is implemented by the **3.3Patch.ImprovedDNS.post_install** installation script.

Libraries

262672_SA1PointRule2.eps ↗

Reference: 59018

Problem: Patch does not include static libraries.

Comments: The *NEXTSTEP Release 3.3 Patch Update* does not include any new static libraries. This means that any programs that are linked with static libs can not benefit from fixes included with this release. In particular, if programs use the *gethostbyname()* or *gethostbyaddr()* library routines, and are statically linked, they must use Fix #1 for the **lookupd** problem. Applications linked with the POSIX libraries are effected by this bug.

925947_SA2PointRule2.eps ↗

Problems NOT Fixed in This Release

426056_SA2PointRule2.eps ↗

The following problems have NOT been fixed in this update:

Networking and Networking Tools

827065_SA1PointRule2.eps ↗

Reference: 49580, 57746

Problem: NetInfo reconnecting does not prefer machines on the local subnet.

Comments: Our intentions were to correct the NetInfo binding and connecting strategy to select the server for a NetInfo domain by first checking on the local host, then on the local subnet, and finally on any accessible server host. We have since discovered that the reconnecting strategy will not "prefer" the local subnet when searching for a server. If a server crashes, clients connected to it won't take advantage of the new strategy when they reconnect. In these few cases, performance won't be improved but will be the same as in Release 3.3.

512730_SA2PointRule2.eps ↗

Problems Fixed in This Release

306031_SA2PointRule2.eps ↗

The following problems have been fixed in this update, but were not documented in the original release notes:

Libraries

553358_SA1PointRule2.eps ↗

Reference: 54336, 54033

Problem: sparc spin_lock() loops infinitely if multi-threading lock not acquired first time through

Fix: This sparc-specific bug has been fixed.

Miscellaneous Fixes

179865_SA1PointRule2.eps ↗

Reference: 52842, 56026

Problem: CERT Advisory: sendmail vulnerabilities.

Fix: The sendmail security vulnerabilities described in CERT Advisories CA-95:05 and CA-95:08 have been fixed. Contact CERT for more details.
