BIBL for Windows
release 2.0

BIBL for Windows is a full-featured package for managing your personal and/or office library.   Features include:

create multiple databases
large (up to 24K) note field for each record
ASCII import/export
link BMP or PCX images files to individual records (use BIBL's built in viewer)
full-text and/or indexed searching
spell checker for note field
multiple reports in various formats
value field that totals across a database
global find and replace across a database (with confirmation)
pop-up windows for data validation on keyword, location and classification fields
powerful (resizeable) display grid for matching records
right-button mouse support
many configuration options...

Complete online documentation is provided in BIBLWIN.HLP (just press
F1 when **BIBL for Windows** is running).

Registered version adds additional features:

100,000 word dictionary for spell-checker included
global find & replace on publisher, keyword, location, classification and subject fields
use external image viewer (to support formats other than BMP or PCX)
retrieve up to 6500 matches on a search
ability to modify field labels for subject and classification field(s)
call word processor from within BIBL to print / edit export files
generate comma-delimited export files (for moving data to other software)
MAKEBIX utility for importing information from MEDLINE, ABI/INFORM, ERIC, Dialog
