

Bike 4.0

This is a new version of the Bike program that adds many new features to the existing program. Many of the new features have been requested by users to help them enhance and analyze their rides. Probably the most exciting new feature is the ability to "roll your own graph". The two custom fields allowed you to enter custom information, and now you can look at it in whatever format you want with the custom graphing feature.

Weekly and monthly statistics can also be viewed now in tabular form and there is a diary file which will be kept based on the name of each ride file.

Bike 4.0 is "try before you buy" software and does require registration if you continue using it beyond the 30 day evaluation period. Registration of Bike 4.0 could not be simpler. It now uses a registration name and number so there is no need to reload the program to upgrade to the registered version. An e-mail message or phone call (with a valid credit card) will get you on-line with the registered version. Additionally, you will receive a master diskette in the mail which will be the "latest and greatest" version of Bike 4.0 with discovered bugs fixed and any new minor enhancements.

I am glad that you are trying Bike. If you have any problems or questions please do not hesitate to contact me:
