COIN COLLECTIONS

This software is designed for use by both hobbyists and the serious investor / collector. OYC allows you to create a catalog and then locate a coin by any one of up to 21 characteristics. For example, you'll be able to get a list of all coins of a specific denomination; or all coins minted in the 1800's; or you can check to see if you have a specific coin in your collection.

The filename used the this format is: COINS

Let's look at the type of information that can be entered using the coin collecting format.

Country - Use this line for the name of the country that minted this coin.

Denomination - the face value of the coin.

Year Minted - the year this coin was minted.

Condition - Describe the condition or enter a standard abbreviation that describes the condition.

Note - For your use for any information that is important to you.

Value - The current replacement value.

Always use the same number of digits when entering values. If the values of items in your collection ranges from $1 to $1000, then the $1 items should have their values entered as 0001 which uses the same number of digits as 1000. If you need to include cents some entries, such as in $1.50, but not on others, you do not need to type ".00". Digits to the right of the decimal point, while significant in determining the value of an item, do not effect how a computer sorts values.

KM Number - enter the KM number.

Type - Your description of the type of coin.

Other - Miscellaneous information you need.

Mint - The name (location) of the mint that produced this coin.

Mintage - The number of coins minted.

Category - Categories might be proof, circulated, or any other way you want to categorize your collection.

Purchase Date - the date you purchased this coin.

Quantity - The quantity of this specific coin you have in your collection.

Price Paid - The price you paid for this coin.

Alloy - the composition of the coin.

Silver ASW - Actual Silver Weight

Gold AGW - Actual Gold Weight

% Silver - The percent of silver in the coin.

Stored - The location this coin(s) is stored. The location might be somewhere in your home, or with an investment company, on in your bank.

Comment - Your comments.
