2400 Baud Only

AcCIS - Windows Access Compuserve Manager

This is the beginning of a very intense project I started for fun to teach myself Visual Basic. This is just a Demo/Beta Version for comments. Try it out, let me know what you think. Some things are working, some not. The CIS-B Protocol works only in download mode. I can't seem to get it going in Upload. If anyone out there knows about protocols, and knows how to program, let me know, I need some one with knowledge of the CISB protocol behavior in the uploading area.

Anyway, take a look at it, and I'll upload the final BETA version in about 1-2 weeks when I hear some news back????

The first three uploads of ACCIS should have never been. The software at that point was only tested on one machine of mine, which had all the supporting files it needed. I have moved it to another machine solely dedicated for the purpose of testing this software. Every upgrade is tested on this machine with only the files that exist in the ZIP file.

Also, the previous version were zipped with PKWARE's beta release of PKZIP 1.93 making it incompatible with other versions of PKZIP. This I apologize for. All newer uploads will be done with previous versions of ZIP.

This is a pre-release of the software. BETA as you will say. As I have only certain interests from CIS it needs to be broadened for other users needs. For this reason I am uploading this explicitly for testing purposes. The file is large, so if your not interested in finding bugs, or don't like bills, don't download this yet from CIS. You can call the above data number for the most recent version and probably spend less at 2400 baud over the phone line than on CIS.

I currently run the software, so it does work, my way. (is there any other) Of course, and that's why I want to find out what works for others, and what doesn't.

I appreciate everyones patience and help in this project. Thank You.

When installing the software please put it into a directory all by itself.

You must run the program SETUP the first time running. Do this by choosing SETUP and then GLOBAL SETUP OPTIONS.

When entering in paths, it should be as follows:

C:\ACCIS\

Please include the Hard Drive ":\\" Directory "\\"

Hence, you should now exit, and reenter so it may load all the proper files.

At this point, you should be up and running. PLAY!!!!
