What is DFREE For Windows?

DFREE is a successor to an obscure but useful DOS application that displayed the amount of disk space that had been consumed and the percentage of space that was free. The usefulness of the Windows version transcends the DOS version. DFREE includes the following features:

- * Ability to Analyze All or a Single Hard Disk Drives (including Networked Drives)
- * Ability to Display Bar or Pie Graphs with other Additional Options
- * Ability to Automatically Update Capacity Utilization (As a Background Task)

Importance of Tracking Capacity Utilization

Creative Uses for DFREE for Windows

DFREE has the capability of reporting, in a real time fashion, the amount of space that is consumed on any single disk drive (floppy or non-removeable) or all disk drives (non-removeable only). It reports this graphically as well as verbally. Some the applications for this are the following:

- I. **Curiosity** - Sometimes you just want to know not only bytes available on a particular disk drive but also bytes consumed as well as the percentages they constitutes. To do this, simply invoke the icon from the Program Manager and it display the current statistic for the current default drive.
- II. **Monitoring Free Space** - If you are running several applications in Windows and your hard drive is approaching capacity, you can call up **DFREE** and turn on the **automatic refresh** and watch to see that you do not get a system crash when your hard drive reaches full capacity.
- III. **Monitoring Overall Capacity Utilization on a Local Area Network** - If you are a system administrator for a Local Area Network, DFREE can help you monitor usage and to plan and project present and future capacity utilization. It can be difficult when you have to go your boss and tell him you need another \$1500 worth of Hard Drive by next Tuesday.

How to Register DFREEm for Windows

What you get by Registering:

- I. You will receive a full license to use DFREEm as a single user or on a single LAN installation.
- II. You will receive the latest version of DFREEm as well as a full printed manual.
- III. You will receive technical support.
- IV. Information on other products by **NEOCOM Microspecialists, Inc.**

How to Register:

- I. Print the Order Form (in a file call ORDER.FRM) included with the programs file by enter the following at the DOS prompt:
C:>COPY ORDER.FRM LPT1
- II. Fill out the printed order form.
- III. Enclose Check, Money Order, or MC/VISA information for \$14.95 plus \$3.00 S&H and Send To:
