Price List and CIS SWREG numbers - Adrock Software

Our unregistered controls are fully functional but will display a single "nag" screen when running standalone applications (when not running using the Delphi IDE). They should only display once.

To register Adrock controls on CompuServe, GO SWREG and key in the appropriate number. You can view all our controls in the SWREG forum by searching using the keyword ADROCK, or the filename template AD*.ZIP.

To register Adrock controls on Internet, Our new site is now up and running at **http://www.Adrock.com** - the latest unregistered controls are available there, and we hope to offer a secure, on-line registration facility soon. We also hope to be able current Registered users secure password protected areas to download the latest updates. (Our new Internet site came online at 1st December, '96 - so if you're reading this, and it's still very close to that date - don't expect too much just yet!   We're working on it!).

16bit controls listed in the SWREG forum are linked to the Delphi forum, Delphi VCL library so that you can download unregistered versions from SWREG or the Delphi, Delphi VCL (5) library (GO DELPHI).

32bit Standard Registrations are similar, but are linked to Borland's new BDelphi32 forum, 3rd Party Products (22) library (GO BDELPHI32).

You can purchase Standard, Upgrade or Full registrations. The Standard registration has no nag screen. 16bit and 32bit Standard Registrations are sold individually to enable us to keep the Standard Registration price as low as possible. It also ensures a smaller zip archive footprint, reducing your download time - you get only what you want. The Full registration includes full source code and compiles on both 16 and 32bit targets (see paragraph below). The Upgrade registration upgrades from Standard (16 or 32bit) to Full - ie you upgrade to get the source code without financial penalty.

Source code purchase enables compilation to both 16 and 32bit targets - except for the SaveGrid component, so Upgrade SWREG options apply to both 16 and 32 bit controls. (The 32bit SaveGrid component in incomplete at the time of writing this text).

SWREG numbers marked "search" were unavailable as at the date of this file.

Standard Registration - without source code

3D Calendar Control	8972	$20
3D Calendar Control 32	10615	$20
Alarm List	7872	$15
