

Starting Octave

octave start interactive Octave session
 octave *file* run Octave on commands in *file*
 octave --help describe command line options

Stopping Octave

quit or exit exit Octave
 INTERRUPT (*e.g.* C-c) terminate current command and return to top-level prompt

Getting Help

help list all commands and built-in variables
 help *command* briefly describe *command*
 help -i use Info to browse Octave manual
 help -i *command* search for *command* in Octave manual

Motion in Info

SPC or C-v scroll forward one screenful
 DEL or M-v scroll backward one screenful
 C-l redraw the display

Node Selection in Info

n select the next node
 p select the previous node
 u select the 'up' node
 t select the 'top' node
 d select the directory node
 < select the first node in the current file
 > select the last node in the current file
 g reads the name of a node and selects it
 C-x k kills the current node

Searching in Info

s search for a string
 C-s search forward incrementally
 C-r search backward incrementally
 i search index & go to corresponding node
 , go to next match from last 'i' command

Command-Line Cursor Motion

C-b move back one character
 C-f move forward one character
 C-a move to the start of the line
 C-e move to the end of the line
 M-f move forward a word
 M-b move backward a word
 C-l clear screen, reprinting current line at top

Inserting or Changing Text

M-TAB insert a tab character
 DEL delete character to the left of the cursor
 C-d delete character under the cursor
 C-v add the next character verbatim
 C-t transpose characters at the point
 M-t transpose words at the point

[] surround optional arguments ... show one or more arguments

Killing and Yanking

C-k kill to the end of the line
 C-y yank the most recently killed text
 M-d kill to the end of the current word
 M-DEL kill the word behind the cursor
 M-y rotate the kill ring and yank the new top

Command Completion and History

TAB complete a command or variable name
 M-? list possible completions
 RET enter the current line
 C-p move 'up' through the history list
 C-n move 'down' through the history list
 M-< move to the first line in the history
 M-> move to the last line in the history
 C-r search backward in the history list
 C-s search forward in the history list

history [-q] [N] list N previous history lines, omitting history numbers if -q
 history -w [file] write history to file (~/.octave_hist if no file argument)

history -r [file] read history from file (~/.octave_hist if no file argument)

edit_history lines edit and then run previous commands from the history list
 run_history lines run previous commands from the history list

[beg] [end] Specify the first and last history commands to edit or run.

If *beg* is greater than *end*, reverse the list of commands before editing. If *end* is omitted, select commands from *beg* to the end of the history list. If both arguments are omitted, edit the previous item in the history list.

Shell Commands

cd *dir* change working directory to *dir*
 pwd print working directory
 ls [options] print directory listing
 getenv (*string*) return value of named environment variable
 system (*cmd*) execute arbitrary shell command string

Matrices

Square brackets delimit literal matrices. Commas separate elements on the same row. Semicolons separate rows. Commas may be replaced by spaces, and semicolons may be replaced by one or more newlines. Elements of a matrix may be arbitrary expressions, provided that all the dimensions agree.

[*x*, *y*, ...] enter a row vector
 [*x*; *y*; ...] enter a column vector
 [*w*, *x*; *y*, *z*] enter a 2x2 matrix

Ranges

base : *limit*
base : *incr* : *limit*

Specify a range of values beginning with *base* with no elements greater than *limit*. If it is omitted, the default value of *incr* is 1. Negative increments are permitted.

Strings and Characters

A *string constant* can be enclosed in either double or single quotes. The backslash character is used to escape special characters.

Index Expressions

var (*idx*) scalar
var (*idx1*, *idx2*) scalar
vector
range
 :

Global Variables

global *var1* ...
 Global variables may be used within a function without having a parameter list provided within the function.

Selected Built-in Variables

EDITOR
 Inf, NaN

 prefer_zero_one_ind
 if_ambiguous, prefer

Statements

for *identifier* = *expr stmt-list* **endfor**

Execute *stmt-list* once for each column of *expr*. The variable *identifier* is set to the value of the current column during each iteration.

while (*condition*) *stmt-list* **endwhile**

Execute *stmt-list* while *condition* is true.

break exit innermost loop

continue go to beginning of innermost loop

return return to calling function

if (*condition*) *if-body* [**else** *else-body*] **endif**

Execute *if-body* if *condition* is true, otherwise execute *else-body*.

if (*condition*) *if-body* [**elseif** (*condition*) *elseif-body*] **endif**

Execute *if-body* if *condition* is true, otherwise execute the *elseif-body* corresponding to the first **elseif** condition that is true, otherwise execute *else-body*.

Any number of **elseif** clauses may appear in an **if** statement.

unwind_protect *body* **unwind_protect_cleanup** *cleanup* **end**

Execute *body*. Execute *cleanup* no matter how control exits *body*.

Defining Functions

function [*ret-list*] *function-name* [(*arg-list*)]

function-body

endfunction

ret-list may be a single identifier or a comma-separated list of identifiers delimited by square-brackets.

arg-list is a comma-separated list of identifiers and may be empty.

Basic Matrix Manipulations

rows (*a*) return number of rows of *a*

columns (*a*) return number of columns of *a*

all (*a*) check if all elements of *a* nonzero

any (*a*) check if any elements of *a* nonzero

find (*a*) return indices of nonzero elements

sort (*a*) order elements in each column of *a*

sum (*a*) sum elements in columns of *a*

prod (*a*) product of elements in columns of *a*

min (*args*) find minimum values

max (*args*) find maximum values

rem (*x*, *y*) find remainder of *x/y*

reshape (*a*, *m*, *n*) reformat *a* to be *m* by *n*

diag (*v*, *k*) create diagonal matrices

linspace (*b*, *l*, *n*) create vector of linearly-spaced elements

logspace (*b*, *l*, *n*) create vector of log-spaced elements

eye (*n*, *m*) create *n* by *m* identity matrix

ones (*n*, *m*) create *n* by *m* matrix of ones

zeros (*n*, *m*) create *n* by *m* matrix of zeros

rand (*n*, *m*) create *n* by *m* matrix of random values

Linear Algebra

chol (*a*)

Cholesky factorization

det (*a*)

compute the determinant of a matrix

eig (*a*)

eigenvalues and eigenvectors

expm (*a*)

compute the exponential of a matrix

hess (*a*)

compute Hessenberg decomposition

inverse (*a*)

invert a square matrix

norm (*a*, *p*)

compute the *p*-norm of a matrix

pinv (*a*)

compute pseudoinverse of *a*

qr (*a*)

compute the QR factorization of a matrix

rank (*a*)

matrix rank

schur (*a*)

Schur decomposition of a matrix

svd (*a*)

singular value decomposition

syl (*a*, *b*, *c*)

solve the Sylvester equation

Equations, ODEs, DAEs, Quadrature

***fsolve**

solve nonlinear algebraic equations

***lsode**

integrate nonlinear ODEs

***dassl**

integrate nonlinear DAEs

***quad**

integrate nonlinear functions

error (*nm*, *code*) for functions that return numeric codes,

print error message for named function and given error code

* See the on-line or printed manual for the complete list of arguments for these functions.

Signal Processing

fft (*a*)

Fast Fourier Transform using FFTPACK

ifft (*a*)

inverse FFT using FFTPACK

firzq (*args*)

FIR filter frequency response

sinc (*x*)

returns $\sin(\pi x)/(\pi x)$

Image Processing

colormap (*map*)

set the current colormap

gray2ind (*i*, *n*)

convert gray scale to Octave image

image (*img*, *zoom*)

display an Octave image matrix

imagesc (*img*, *zoom*)

display scaled matrix as image

imshow (*img*, *map*)

display Octave image

imshow (*i*, *n*)

display gray scale image

imshow (*r*, *g*, *b*)

display RGB image

ind2gray (*img*, *map*)

convert Octave image to gray scale

ind2rgb (*img*, *map*)

convert indexed image to RGB

loadimage (*file*)

load an image file

rgb2ind (*r*, *g*, *b*)

convert RGB to Octave image

saveimage (*file*, *img*, *fmt*, *map*) save a matrix to *file*

Sets

create_set (*a*, *b*)

create row vector of unique values

complement (*a*, *b*)

elements of *b* not in *a*

intersection (*a*, *b*)

intersection of sets *a* and *b*

union (*a*, *b*)

union of sets *a* and *b*

Strings

strcmp (*s*, *t*)

compare strings

strcat (*s*, *t*, ...)

concatenate strings

C-style Input and

fopen (*name*, *mode*)

fclose (*file*)

printf (*fmt*, ...)

fprintf (*file*, *fmt*, ...)

sprintf (*fmt*, ...)

scanf (*fmt*)

fscanf (*file*, *fmt*)

sscanf (*str*, *fmt*)

fgets (*file*, *len*)

fflush (*file*)

ftell (*file*)

frewind (*file*)

freport

fread (*file*, *size*, *pr*)

fwrite (*file*, *size*, *pr*)

feof (*file*)

A file may be referenced

returned from **fopen**.

Octave starts: **stdin**,

Other Input and

save *file var ...*

load *file*

disp (*var*)

Miscellaneous F

eval (*str*)

feval (*str*, ...)

error (*message*)

clear *pattern*

exist (*str*)

who

Polynomials

compan (*p*)

conv (*a*, *b*)

deconv (*a*, *b*)

poly (*a*)

polyderiv (*p*)

polyreduce (*p*)

polyval (*p*, *x*)

polyvalm (*p*, *x*)

roots (*p*)

residue (*a*, *b*)

Statistics

corrcoef (*x*, *y*)

cov (*x*, *y*)

mean (*a*)

median (*a*)

std (*a*)

var (*a*)
