

Overview of Quick Cab

Cripton Quick Cab is designed to make cab file creation easy. Quick Cab uses makecab.exe and extract.exe to create regular and self extracting cab files. Simply add the files you want, name the cab file and click Create Cab.

What's new in v4.2?

Improved Interface

General Optimisation

Fixed cab-->exe problem again

Fixed problem with setup.rpt not being found in some cases again(?)

Makecab.exe, extract.exe, and cabarc.exe are copyright Microsoft Corporation

Quick Cab is copyright ©1997 Cripton Corporation

Artificial Intelligence

Quick Cab 4.0 introduced SAI (Simulated Artificial Intelligence) technology. What this means is that with use, Quick Cab can learn your habits, and accordingly configure itself to best suit your needs.

This is the first program we have written that incorporates SAI technology, and hopefully there will be many more to come. We intend to develop SAI to a point where all programmers can utilise its special abilities easily in their own programs.

SAI is a very basic implementation of Artificial Intelligence, but it serves its purpose well, and hopefully it will help to instigate further advances in Artificial Intelligence technology.
