## Rosenthal UnInstall (tm)

Automatically remove unwanted Windows and DOS programs, files, directories and restore the systems AUTOEXEC.BAT, CONFIG.SYS, WIN.INI, SYSTEM.INI and disk boot sector system tracks. Run Rosenthal UnInstall before you add anything new to your system. New programs can then be added and, at your option, kept, or deleted, and the system completely returned to normal.

Single systems, as well as networks with multiple and even removable drives are supported. Safeguards provide display of all directories and files (including hidden and duplicate ones) for review and confirmation. Accept additions, or safely delete them.

The best way to determine if any program will satisfy your needs is to try it for yourself. Rosenthal UnInstall makes trying new software more attractive by eliminating the aggravation normally associated with removing unwanted software and restoring the system. Unwanted software is removed and the system restored safely and automatically. All modifications, additions and deletions made to the AUTOEXEC.BAT, CONFIG.SYS, WIN.INI and SYSTEM.INI are restored. At your option, any of the added files and subdirectories may be kept or safely deleted, including hidden and read-only files. Even the disk boot sectors are handled.

## How to use Rosenthal UnInstall

Copy the files from your distribution diskette, CD-ROM or archive to your hard disk. Rosenthal Uninstall will work in both a DOS or MS-Windows environment. If you use your Windows program manager to add it (NEW) it will display an icon. Although this program has a MS-Windows file format, it forces the system into the DOS mode. That way, newly installed software that has crashed may be removed without relying on MS-Windows to still be operational.

The first time you run Rosenthal UnInstall, it will prompt you to enter your full name, and your registered serial number. Don't take shortcuts when entering your real name correctly, you will need to know exactly how it was entered should you require technical support and upgrades.

This software may be used without a serial number for a limited evaluation period before paying the required registration fee. If you have a registered copy, enter the serial number exactly as it appears printed on

the distribution diskette when prompted. To try this software without a registered serial number, just press ENTER at the serial number prompt.

Registered users also receive a stick-on label with the last digits of their serial number. The label must be affixed to the computer. Each computer must have its own registered Rosenthal UnInstall serial number. Additionally, registered users will receive the latest version of this program and the unregistered software to evaluate listed in the TRY\_THIS.DOC. See the ORDER.FRM file for details.

Rosenthal Uninstall will map each disk drive as it is logged. Any drive with read and write access will work including network, fixed, removable, PCMCIA, ram-card and an unlimited number of floppy diskettes.

Newly created files also display their date and time stamps. You may selectively exempt files from the removal list. If you elect to exempt a file from being purged that resides in a directory that is listed for removal, the directory is automatically exempted as well.

Accepting added software with the U - update option displays any identical copies on the same disk that may already exist.

Comments and constructive criticism are always greatly appreciated, and thank you for trying my software.

Doren Rosenthal

#### Program Requirements

Rosenthal UnInstall runs using MS-Windows 3 or higher and /or DOS 3.0 or higher and has been tested with versions through 6.2.

#### Removing Rosenthal UnInstall

Rosenthal UnInstall saves a copy of your original boot sector before generating a special security replacement. To use your original boot sector as the default, enter BOOT on the command line when you run the program once. Change the logged drive to each drive that you had mapped previously. Once this is done, you may delete the UnInstall from your system.
